Description

DTM63392F is a Registered 128Mx72 memory module which conforms to JEDEC's DDR2, PC2-5300 standard. The assembly is comprised of one Rank of nine 128Mx8 DDR2 Samsung DRAMs, one Register with command/address parity, one Phase-Locked Loop (PLL), and one 2K-bit EEPROM used for Serial Presence Detect.

Both output driver strength and input termination impedance are programmable to maintain signal integrity on the I/O signals. Error Checking and Correction bits are provided to ensure data integrity. In addition, parity is checked for all address and control lines, even those address lines not used by this module.

The eighteen Data Strobe signals may be used either as nine differential pairs, or as eighteen single-ended strobes for use in systems with a mix of x4 and x8 DRAMs.

Bus Termination Voltage	V_{TT}	V_{REF} - 0.04	V_{REF}	V_{REF} + 0.04	V	

Notes:
1. The value of V_{REF} is expected to equal one-half V_{DD} and to track variations in the V_{DD} DC level. Peak-to-peak noise on V_{REF} may not exceed ±1% of its DC value.

Notes:
1. $V_{IN(DC)}$ specifies the allowable DC excursion of each input of a differential pair.
2. $V_{ID(DC)}$ specifies the input differential voltage, *i.e.* the absolute value of the difference between the two voltages of a differential pair.
3. $V_{ID(AC)}$ specifies the input differential voltage required for switching.
4. The typical value of $V_{IX(AC)}$ is expected to be 0.5 V_{DD} and is expected to track variations in V_{DD}.
